

CM4000

Simple pay-per-copy, self service multi-coin operated control unit

- Suitable in libraries, newsagents or public areas where pay-per-use copying is required
- Sturdy robust construction
- Supports 8 different coins (including \$2, \$1, 50c, 20c, 10c)
- Inbuilt display to show credit and copy quantities
- Combines credit for multiple prints
- Manages up to 4 copy prices (A4, A3, B/W, colour)
- Security door with locking mechanism
- Simple installation and configuration
- Low maintenance and ongoing costs

Built by trusted European manufacturer Cartadis, the CM4000 is a stand alone coin unit ideal for pay-per-copy environments. It does not require a network connection and can be left unattended for simple use. The CM4000 unit connects to virtually all commercial photocopiers, and can provide simple statistical information on your users printer habits.

Version	CM4000 (9700600) with pedestal (9700610)
Dimensions	Height 420mm; Width 280mm; Depth 300mm (base)

How does it work?

The user inserts coins into the CM4000 coin slot with the ability to pre-load coins for multiple copies.** Once the coins have been loaded the user is able to see their available credit and allowed print quantity on the display. The user can then proceed to print or make copies until the the credit and allowed print quantity shown on the display is exhausted. Administrators have the ability to set copy and print prices as desired.

*This feature is vendor and model specific. Please check compatibility.

**The CM4000 does not dispense change. Remaining credit is retained for use by either the next user or until manually cleared by admin.
